

November 2022

Introduction

SchoolVue UK Ltd is an established ed-tech company based in the UK and has a track record of helping schools to drive school improvement. The intelligent use of data affects the work of all professionals involved in education. There can be no going back to the days when decisions were made on hunches and anecdotal information. Using data effectively will help everyone involved in schools.

Our range of education services and powerful online education suite help schools to provide excellent provision and support for their students. Interpreting and sharing information is key to driving performance.

Our suite of online modules have been developed in partnership with UK schools. Many of the features and ideas have come from the senior leaders and classroom teachers that use it. Designed as a stand-alone education suite or complement to a school's ERP System.

Supporting schools in India

The use of ERP's in Indian schools is significantly growing. These are crucial administrative systems but do not necessarily provide the scholastic tools required in terms of student information and analytics to inform strategic decision making. Whether the focus is on a student, cohorts, vulnerable groups, subjects, teachers or whole school performance, the SchoolVue education suite brings together a blend of information and makes it accessible in an insightful way to all school stakeholders.

SchoolVue is highly configurable in terms of school setup. The school has full control over:

Subject creation

- Curricular
- Co-curricular
- Extra-curricular

- Attendance
- Effort
- Behaviour
- Home learning

Student Information collected

- Grades
- Scores
- Progress judgements
- Learning outcomes

Student well being

- Behaviour concerns
- Praise awards
- Engagement

The NEP brings many welcomed opportunities to our schools but also presents challenges to school leaders. Consideration will need to be given to current education provisions in terms of:

- What needs to change?
- What can be adapted?
- What needs to be added?

Our modules are highly flexible and will support schools to embed, track and monitor the implementation of the NEP.

Closing the gap for disadvantaged groups for example. Our modules provide interactive analytics dashboards that allow schools to track and monitor students based on their contextual information. Whether it's socio-economic groups or student with special educational needs, strategic decisions can be made and meaningful interventions put in place.

Significant examination reforms in grades 1-12 is another example. The metrics for examinations will change over time. Schools will need to ensure that their students are best placed to achieve well. Effective and flexible analytics will be crucial to school leaders in tracking and monitoring students in a new examination landscape. The SchoolVue Performance Analysis module is flexible and can adapt to the proposed reforms.

Partnership with UK Skills Ltd

SchoolVue and UK Skills have a long standing partnership and have worked on several projects together. Most recently was a collaboration delivering a series of standards and benchmarking webinars to Indian schools during the covid pandemic. SchoolVue delivered elements on Curriculum and School analytics.

Bringing the SchoolVue Education Suite to Indian schools will be a joint venture with UK Skills.

Commitment

We would very much welcome a school identified by the high commission to take part in a pilot with an agreed number of learners for a specified amount of time. The School would have access to the SchoolVue Online Education Suite along with support in setup process.

Yours Sincerely

Jon Munt

Founder and CEO
